

WIPE OUT ONE

ANTI-MICROBIAL MICROFIBER

99.99% Microbial Kill Without Chemicals

Eliminate the need for chemicals with the revolutionary WIPE OUT ONE microfiber cloth. Registered with the EPA, this technology is proven to deliver effectiveness against over 75 forms of bacteria, fungi, algae and yeast.

Patented Physical Reaction Pierces and Electrocutes Microbes

Other anti-microbial treatments rely upon a chemical reaction that "leaches" out of the product. Microbials can build up a resistance to this treatment and can morph into "super bugs" that are immune to the treatment.

WIPE OUT ONE's effectiveness is never depleted because of its unique technology.

Saves Labor and Chemical Costs

Clean and kill microbes in one wipe ... less labor and no chemicals. It's a win-win!

WIPE OUT ONE holds its killing power for an average of 500 washings. Because it's made with the finest microfiber fibers, it delivers unsurpassed absorbency and performance. It will not scratch surfaces.

WIPE OUT ONE delivers a 99.99% kill on 40 different bacteria including the common ones such as MRSA, VRE, E-Coli, Staphylococcus aureus (pigmented and non-pigmented), Salmonella choleraesuis, and Streptococcus mutans. WIPE OUT ONE is equally effective against 26 different fungi including Trichophyton mentagrophytes (Athlete's Foot), Aspergillus niger (black mold on fruits and vegetables), Aspergillus versicolor (allergen, cause dermatitis), and Aspergillus flavus (environmental mold, human pathogen). It has also been proven effective against various forms of algae and yeast.
